## Lean overview

Lean encompasses both a philosophy and a series of tools and techniques designed to identify and eliminate waste from business processes in every function in every sector, every single day.

Lean is the elimination of anything not absolutely required to deliver a cost effective quality product or service on time.

Lean processes improve morale by providing the safest, most effective way for employees to do their jobs, right first time, every time.

## Our approach to Tool Specific Workshops

Our workshops are aimed at individuals who require refresher training for particular Lean tools, have a specific knowledge requirement, or require facilitated application training on current business issues.

These courses are tailored to suit customer needs following an initial consultation on their requirements and current knowledge.

Each of the topics listed below are of half a day duration and any 2 modules can be selected to create your own bespoke workshop. If the tools that you require are not listed below please contact us to discuss your requirements.

## Half day modular tools

- Cost of Poor Quality - Calculation and Reporting
- Fishbone Diagrams, 5 Why Analysis and Cause and Effect Matrix
- Process Mapping and Visual Mapping Techniques
- Graphical Analysis Methods
- Failure Mode Effect Analysis
- Mistake Proofing & Standard Operating Procedures
- Statistical Process Control - Attribute
- Statistical Process Control - Variable
- 5S and Visual Management
- Kanban and One Piece Flow
- Total Productive Maintenance and Overall Equipment Effectiveness
- Setup Reduction
