

# Project Management Training

Your Lean Six Sigma Partner  
...providing practical solutions for you

## Benefits of managing projects

Many organisations are experiencing soaring levels of change. Change is a way of life for organisations that seek to increase market share and profitability.

In an uncertain world it is essential to manage the risk associated with change and innovation. Most projects combine diverse resources, skills and technologies in order to deliver planned objectives and sustained benefits.

Effective project management ensures that forecasted benefits are achieved to the required quality within agreed time and budget commitments.

## Our approach to project management training

Our training broadly follows the fundamentals of the PRINCE2 (PRojects In Controlled Environments) methodology which is a recognised government approved method for project management.

We guide project managers through project management methodology and show them how a project revolves around an organisation's business case. The business case drives the project management process from initial set up all the way through to project completion.

Project managers are taught how to start up, then initiate a project and how to complete the necessary plans associated with these key early stages. They are then taught how to plan, manage and control the project stages. Project managers are also taught the required roles, responsibilities and the organisational structure necessary to ensure delivery of a successful project.

Throughout the training course project managers are shown how to manage and plan for exceptions. They are shown how management of risk is an integral part of the project management process and how risk can be minimised using risk analysis tools, risk mitigation, FMEA (Failure Modes & Effect Analysis), risk and issue logs.

Project managers are taught how to ensure that product and process quality are maintained throughout each project and how both product and process quality are linked to internal and external quality and environmental standards.

Finally project managers are shown how to close a project, to communicate project results and to log lessons learned for use in future projects.

Courses can be tailored specifically to our clients requirements from a 1 day overview to 5 days for in depth knowledge.

## Our consultants

Our consultants are all certified Lean and Six Sigma Master Black Belts who have gained a wide range of Six Sigma experience in multinational companies with established Six Sigma deployments. They all have considerable Lean Enterprise experience which they bring to bear in segmenting waste and variation in processes.

Our consultants have individually managed numerous effective projects and mentored over 1000 successful projects.
