

Six Sigma Certification

Benefits for everyone

Benefits for your organisation

A company adopting rigorous Lean Six Sigma Certification, such as that offered by Paloma Consulting Limited, will benefit from developing a pool of high calibre Black/Green Belts, clear certification and recognition criteria, high standards in completed projects and Black/Green Belts who are motivated to complete further improvement projects.

The company will generate financial savings, as certification requires completed projects to meet minimum savings criteria. The company will gain recognition that it takes process improvement seriously, and that the company has a high standard of Six Sigma deployment. In other words, the expected savings will be sustainable.

Benefits for the individual Six Sigma Black/Green Belts

By achieving a rigorous Lean Six Sigma Certification such as that offered by Paloma Consulting Limited you will gain recognition of your Six Sigma expertise

- You gain a recognised qualification
- Helps with your career progression
- You are more attractive in the internal and external job market
- Your self-esteem is enhanced

Meaningful certification

We have found that offering Six Sigma certification is a major driver in reducing the cycle time of Six Sigma Projects, whilst delivering the Six Sigma Project benefits anticipated by management. We only award certification when real benefits have been delivered to the company, and extensive, appropriate Six Sigma expertise has been demonstrated by the candidate.

Don't worry though, we are here to help you succeed.

How to certify

We coach our students to Lean Six Sigma certification with on-site support and a cost effective project e-mail review and feedback commentary service. More details are contained in our Support Service and E-mail Review Service brochures, which can be downloaded from our web site. As you progress towards certification we direct our comments specifically to what you need to do to achieve Certification as a certified Black Belt or Green Belt. Where we consider the relevant Lean Six Sigma tools to be either missing or inappropriately applied, we say so, with advice on your next steps, so that management see your projects are completed promptly and you can gain the certification you seek.

Certification requirements for Black Belts

Satisfactory completion of the Black Belt training course, as evidenced by:

- Attendance at all training sessions.
- Contributions to class discussions & exercises.
- A presentation of your project's latest status, at each week's training.

Completion of two projects with defect reduction that achieves each project's objective.

- Each project meets minimum savings criteria (typically £50k per annum).
- Verified improvements are sustained for at least three months.

Completion of project final reports (for each of the two projects).

- Each report shows a history of the project demonstrating thorough application of the Six Sigma Methodology
- Each report is approved by Champion, Finance & independent Six Sigma certified Master Black Belt.

Certification requirements for Green Belts

The same requirements apply as for Black Belts except that only **one** project needs to be completed, which meets typical minimum savings criteria of £25k and uses fewer Six Sigma tools.

Certification requirements for Master Black Belts

Certification requirements for Master Black Belts usually have a high degree of specificity, depending on how the company seeks to deploy its future Master Black Belts. We work with our clients to ensure their specific needs for Master Belts are met whilst ensuring standards remain high.

Contact us

E-mail us at info@palomaconsulting.com or call +44 7702 528 764 to commence a dialogue with us. We will provide you with advice on how to keep your project on track and help you certify as a Lean Six Sigma Black Belt or Green Belt. Information on how to certify as a Master Black Belt is also available on request.
